

## AIRSKIN at Motek 2024

Imagine a world where human-robot collaboration happens effortlessly, without the need for safety barriers or cages. With **AIRSKIN**, that world is already here.

At **Motek Messe 2024**, we proudly demonstrated how **AIRSKIN** technology transforms industrial environments, making fenceless, fully safe human-robot interaction a reality.

In a dynamic 4.5m x 4.5m demo space, three industrial robots seamlessly executed tasks such as palletizing, pick-and-place, and quality inspection—all while working safely alongside humans.

With **AIRSKIN**, automation becomes not only faster and more efficient but also safer, unlocking new possibilities for modern factories. It's a significant step forward, setting a new standard for industrial safety and productivity.

### AIRSKIN at Motek 2024

A special shout-out to our amazing team for their hard work in making this event a success!

[About us](#) - AIRSKIN is the industry game changer by unleashing the full power of industrial automation. We are the go-to solution provider for open and flexible robot applications with our patented safety technology AIRSKIN, which upgrades standard industrial robots to fenceless applications. More information on our website: [airskin.io](https://airskin.io)

[Speed](#) 2000 mm/s free space and 400 mm/s clamping

[Flexibility](#) One application for several production lines

[Space](#) Up to 90 % reduction

[Safety](#) Simplified risk assessment, highest safety PLe/CAT3

*Based in Austria, we develop and produce AIRSKIN, a patented, add-on safety sensor solution for robots, AGVs, End-of-Arm-Tooling (EOAT) and other moving machinery.*
